

Rectangle

Runnable

com.example.zad6labv2.Cell

```
classDiagram
    class Rectangle
    class Runnable
    class Cell["com.example.zad6labv2.Cell"]
    Cell --|> Rectangle
    Cell --|> Runnable
```

The diagram illustrates a class hierarchy where the `Cell` class inherits from both the `Rectangle` and `Runnable` classes. The `Cell` class is positioned at the bottom, while `Rectangle` and `Runnable` are at the top. Arrows point from the `Cell` box to the bottom of each of the `Rectangle` and `Runnable` boxes, indicating the inheritance relationship.
